BPEC (Level 3) Solar Domestic Hot Water Heating Systems

As more families feel the pinch of 70% Energy price rises*, many are considering alternative energy resources such as Solar Heating. Solar Energy can provide up to 50% of families' annual Hot Water Requirements (www.greenenergy.org.uk).

The Government predicts that the UK Solar industry will grow from 7,000 to 50,000 employees in the next 5 years. When you consider the potential savings, you can see why!

Government Approved
'BPEC (Level 3) Solar Domestic Hot Water Systems' allows you to extend your current range of work to include the installation of Solar Heating Systems.

The cost (to customer) of a Solar heating installation will vary: £2,500 - £6,500

The course is approved under the Government's Clear Skies / DTI's Low Carbon Buildings Grants Schemes.

As an approved Installer, your customers can apply for a grant to offset the cost of a Solar Heating Installation, potentially saving the customer £££'s!

Visit: www.clear-skies.org to register as an Approved Solar Installer

Am I Eligible?

The course is designed for qualified Gas Engineers &/or Plumbers wanting to take advantage of the expanding Solar market.

Course Content

The course is delivered as a mix of practical and theory training at the MET-UK 'Centre of Excellence'

BPEC (Level 3) Solar Domestic Hot Water Heating Systems
